

Three months - three starts. Macro Games after NatGeo Color WILD is going to release two more games

NatGeo Color WILD is a new generation of coloring books

In November 2017, our company in collaboration with National Geographic released a coloring book of the new generation - NatGeo Color WILD.

The best photographers of the world provided real photos, which turned into pages of coloring book. You can paint the world as it is or embody the most extraordinary ideas with the help of various tools, textures, palettes.

Nat Geo Color Wild app is already available for download on iOS in eight countries of the world, and UK, Poland and Ukraine are among them

<https://itunes.apple.com/GB/app/id1258912255?mt=8> And an Android version will appear in the Google Play Store in a few days.

EcoBalance is the appealing combination of a logical game with world simulator

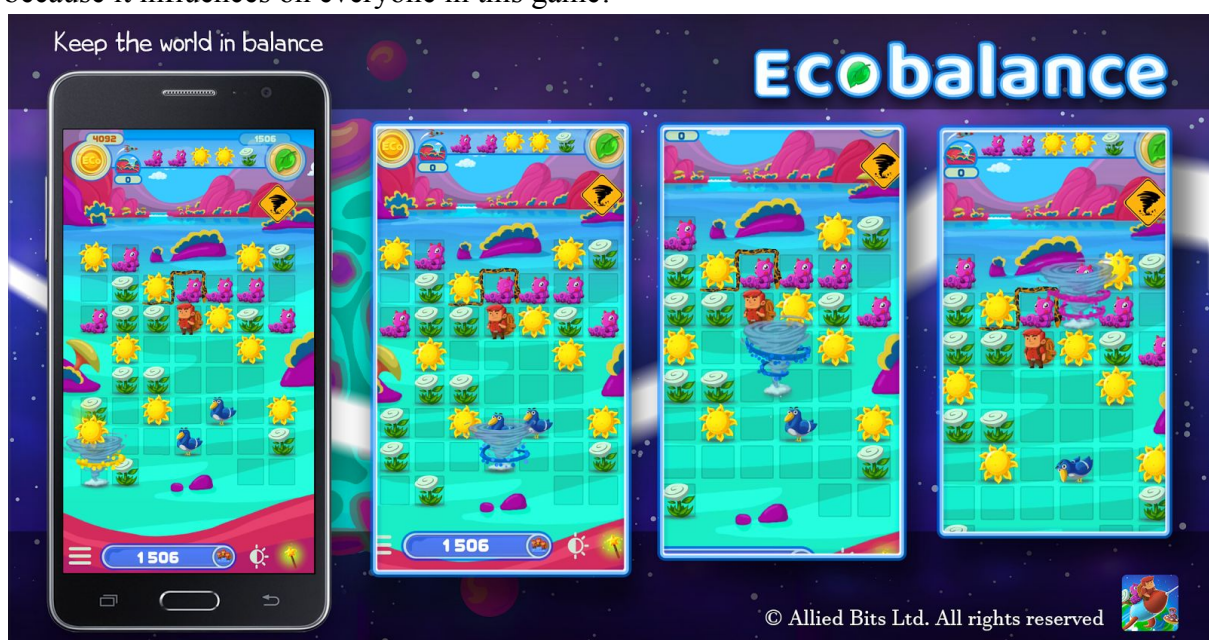

A new casual game - EcoBalance - will appear in stores before the end of December.

Its players take part in the development of the life chain, turning the Sun into a flower, then a flower into a caterpillar; a caterpillar becomes a bird, and a bird turns into a human.

Tornados, earthquakes, armageddon, insidious snakes and other dangerous opponents will obstruct to arrange a meeting of units on the game field, impede the transition to the next stage of evolutionary development.

Sometimes, an UFO will visit the planet and drop the aliens, who have a secret. Therefore, we give you only one advice - be attentive and do not forget about "ecoboom", because it influences on everyone in this game!

EcoBalance is by no means a simple game. It is essential to make deliberate decisions quickly, be courageous to take the risk, as this is the only way to keep the world in balance and reach the harmony.

A large construction or another casual game - Energy

January 2018 promises to be bright - we are launching the game for the true defenders of nature. In Energy it is important to use renewable sources of energy - the sun, water, air, etc. - for the construction of power plants. Produce, collect and sell clean energy.

The main goal is to keep the planet and save nature from the harmful emissions into the environment. Everyone can become a real energy mogul and help the world to find harmony!

We set a high pace because launching three completely different, interesting, and exciting applications is not an easy task. Will they be as successful as the beloved coloring book? We will know very soon.
